7-9-44: SIGN BACKGROUND: In computing the area of sign background, only the face or faces which can be seen from any one direction at one time shall be counted. (Ord. 3056, 02-25-16)

7-9-45: DESIGN:

- (A) Signs and sign structures shall be designed and constructed to resist wind and seismic forces as specified in this section. All bracing systems shall be designed and constructed to transfer lateral forces to the foundations. For signs on buildings, the dead and lateral loads shall be transmitted through the structural frame of the building to the ground in such manner as not to overstress any of the elements thereof. The overturning moment produced from lateral forces shall in no case exceed two-thirds of the dead-load resisting moment. Uplift due to overturning shall be adequately resisted by proper anchorage to the ground or to the structural frame of the building. The weight of earth superimposed over footings may be used in determining the dead-load resisting moment. Such earth shall be carefully placed and thoroughly compacted.
- (B) Signs and sign structures shall be designed and constructed to resist wind forces as specified in the most current City-adopted edition of the International Building Code thirty feet (30') above ground with adjustment in pressure for height as outlined in the International Building Code and seismic design category "D."
- (C) Design and construction with plastic material shall be in accordance with the most current City-adopted edition of the International Building Code.

An inspection of forms and footings shall be called for before any concrete is poured whenever this manner of construction is applicable. The sign contractor must call for an inspection when a sign has been installed. (Ord. 3056, 02-25-16)

7-9-47: PROJECTION AND CLEARANCE:

- (A) All signs shall conform to the clearance and projection requirements of this Sign Code.

shall be in accordance with the Idaho Code. The term "overhead conductors" as used in this Section means any electrical conductor, either bare or insulated, installed above the ground except such conductors which are enclosed in rigid conduit or other material covering of equal strength.

- (C) No sign or sign structure shall be erected in such a manner that any portion of its surface or supports will interfere in any way with the free use of any fire escape, exit, or standpipe.
- (D) In all commercial zones, wall mounted signs within five feet (5') of an opening in an exterior wall shall be constructed of non-combustible material or most current City-adopted edition of the International Building Code approved plastics, when mounted against a non-combustible wall.
- (E) No sign or sign structure shall project into any public alley. Projection into a private alley or drive shall not be allowed below a height of fourteen feet (14') above grade.
(Ord. 3056, 02-25-16)

- (B) Master Planned Development signs shall be considered an on-premise sign, common to all properties within the development and may be located on any lot or common area within the development according to the following standards:
 - (1) The sign shall be located adjacent to an arterial street;
 - (2) Only one (1) sign shall be permitted per arterial street frontage within the development;

- (3) A sign of no greater than six hundred square feet (600 sq. ft.) and sixty feet (60') in height in commercial zones;
- (4) The design and construction of sign shall be integrated into the architecture of the development by the use of similar construction materials and colors;
- (5) The sign is incorporated into a minimum landscaped area of ten feet (10') by ten feet (10');
- (6) The sign shall be consistent with an approved signage plan for the development indicating the type and size of signs proposed for each lot and building site;
- (7) The location of the design of the sign shall convey its connection to the development. Factors to be considered shall include but not be limited to:

- (D) Each electronic message center shall be equipped with a photocell dimmer to automatically dim with changes in ambient light. When requesting a permit for an electronic message center, the applicant shall submit documentation certifying the sign is equipped with a photocell dimmer and the dimmer shall be used at all times the sign is in operation.
- (E) The night-time illumination of LED billboards shall conform to the criteria in this section. The difference between off and solid-message measurements of an LED billboard shall not exceed 0.3 footcandles at night, applicable one-half (1/2) hour after sunset. The illuminance of an LED billboard shall be measured with an illuminance meter set to measure footcandles accurate to at least two decimals. Illuminance shall be measured with

the sign off, and again with the sign displaying a white image for a full color-capable sign or a solid message for a single-color sign. All measurements shall be taken perpendicular to the face of the LED billboard at the distance determined by the total square footage of the sign as set forth in the following table:

200	141
220	148
240	155
260	161
280	167
300	173
480	219
